                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                र्
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC or serine/threonine kinase (PTK and STK) families. The polynucleotides CC encoding protein kinases and the polypeptides may be used in the CC prevention, diagnosis and treatment of diseases associated with CC inappropriate kinase expression. For example, they may be used to treat CC disease (e.g. atherosclerosis), metabolic disorders (e.g. diabetes), CC immune related diseases (e.g. rheumatoid arthritis), neurological CC disorders (e.g. schizophrenia), neurodegenerative disorders (e.g. parkinson's disease), inflammatory disorders (e.g. asthma), infectious CC disease (e.g. HIV) and reproductive disorders (e.g. asthma), infectious CC disease (e.g. HIV) and reproductive disorders (e.g. infertility). CC additionally, polynucleotides encoding protein kinases may be used for gene therapy and as DNA probes in diagnostic assays.

CC The protein kinase polypeptides may be used as antigens in the production CC of antibodies against the protein kinases and in assays to identify modulators of protein kinase expression and activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               음 중
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁

                                                                                             용
                                                                                                             ঠ
                                                                                                                                          용
                                                                                                                                                                 ঠ
                                                                                                                                                                                                               8
                                                                                                                                                                                                                                                                                                                      The invention relates to human nucleic acids (AAI57798-AAI61369) and CC the encoded polypeptides (AAM38642-AAM42213) with nootropic, CC immunosuppressant and cytostatic activity. The polynucleotides are useful CC in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and CC localised neuropathies and central nervous system diseases, such as CC Alzheimer's, Parkinson's disease, Huntington's diseases, such as CC Clateral sclerosis, and Shy-Drager Syndrome. Other uses include the CC utilisation of the activity, chemicactic/chemokinetic activity, haemostatic cand thrombolytic activity, cancer diagnosis and therapy, drug screening, CC assays for receptor activity, arthritis and inflammation, leukaemias and CC N.S disorders.

CC Note: The sequence data for this patent did not form part of the printed constraints.

                                                                                                                                                                        The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypaptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytrostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, and thrombolytic activity, cancer diagnosis and therapy, drug screening,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    03-AUG-2000;

                                             The present sequence represents a partial polypeptide which has kinase cactivity. The kinase polymucleotides can be used to express the polypeptides, and as probes to identify nucleic acids encoding convoicing having kinase activity. The kinase polypeptides and convoicing proteins having kinase activity. The kinase polypeptides and isoelectric fragmented polypeptides are used as molecular weight and isoelectric focusing markers, and as controls for peptide fragmentation. They also color have a number of therapeutic uses as kinases play a central role in celular signal transduction. The polypeptides could also be used to identify binding partner proteins. The polypeptides can also be used as a reagent to identify any proteins that the polypeptide regulates, and proteins with which it might interact. The polypeptides can be used in cused for preparation of antibodies. The antibodies can be used in cassays to detect the presence of the protein, and to purify the protein by immunoaffinity chromatography.

AAC77607 to AAC78448 encode the human cancer associated proteins given in AAB43398 to AAB4239. The proteins can have activities based on the tissues and cells the genes are expressed in. Example of activities include: cytostatic; proliferative; vulnerary; immunomodulator; antiinflammatory; antithyroid; antirheumatic; antibacterial; antiviral; antiviral; antipolical; antipolicatic; antipolicatic; antipolicatic; antipolicatic and antipolicatic; cancerprotective; cardiant; thrombolytic; coagulant; nootropic; vasotropic; antipsoriatic and antiangiogenic. The polynucleotides and polypeptides can be used for preventing, treating or ameliorating medical conditions and disgnosing pathological conditions. Polynucleotides, polypeptides, antibodies, agonists and antagonists from the present invention may be used to treat immune disorders by activating

                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is that of novel human protein phosphatase cand kinase protein pPHKP-5, as predicted from Incyte Clone ID No. CC 1271505CB1 (see AAF30480). Tissues that express PPHKP-5 (as a CC fraction of total tissues expressing PPHKP-5) include reproductive (0.288), gastrointestinal (0.212) and haematopoietic or immune (0.192). Diseases or conditions associated with tissues expressing PPHKP-5) include CC (0.592). Diseases or conditions associated with tissues expressing PPHKP-5) include CC (0.577), inflammation or trauma (0.327) and cell CC cancer (0.577), inflammation or trauma (0.327) and cell CC cancer (0.577), inflammation or trauma (0.327) and cell CC cancer (0.592). The encoded protein hows homology to rat kinase. The invention provides human PPHKP-1 to -11 polypeptides (see AAB30322-32) and polynucleotides (see AAF30476-86). It also provides expression vectors, host cells, antibodies, agonists and antagonists, as well as methods for disgnosing, treating or preventing disorders associated with expression of PPHKP, including gastrointestinal disorders, immune system disorders, neurological disorders and cell proliferative disorders, including cancer.

                                                                                                    ঠ
                                                                                                                                                                                                                                     The invention provides an isolated human tribbles homologue-1 (htrb-1, CC also known as stress kinase inhibitor protein (SKIP-1)) polypeptide. The CC htrb polypeptide is useful for inhibiting an AP-1 mediated inflammatory CC signal in a cell. The polypeptide employed in the method is preferably CC htrb-3 N C. It is also useful for providing htrb agonist activity for CC activating an ERK-mediated signal e.g. AP-1-mediated gene activation signal, an estrogen receptor-mediated gene activation signal, an estrogen receptor-mediated gene activation signal, an estrogen receptor-mediated gene activation signal, an cell. Htrb modulators are useful for modulating AP-1 mediated inflammatory signal in a cell such as tumor necrosis factor (TNP) CC induced inflammatory signal, or an interleukin induced inflammatory compounds e.g. for treating and/or provening assays, predictive medicine CC sometime compounds e.g. for treating and/or provening diseases caused by abnormal htrb activity, such as rheumatoid arthritis diseases caused by abnormal htrb activity, such as rheumatoid arthritis diseases caused compounds e.g. for treating and/or proventing diseases caused by abnormal htrb activity, such as rheumatoid arthritis diseases caused compounds e.g. for treating and/or proventing diseases caused by abnormal htrb activity such as rheumatoid arthritis diseases caused compounds of the stream of the such as the care of an arthritis diseases caused compounds of the such as the such as the care of an arthritis diseases caused compounds of the such as the care of human placenta, intraventicular the moorrhage, neonatal white matter damage and subsequent cerebral palsy; and inflammation or autoimmune disorders. The present sequence represents

                                                                                                                                                                                                                                             The invention provides human kinases (PKIN) and polynucleotides encoding PKIN. The PKIN polypeptides can be expressed using standard recombinant methodology. The PKIN polypeptides, polynucleotides, modulators and specific antibodies are useful in the diagnosis, treatment and prevention of cancer, immune disorders, disorders affecting growth and development, atherosclerosis, and other cardiovascular diseases, and lipid disorders and in the assessment of the effects of exogenous compounds on the expression of nucleic acid sequences of human kinases. The present sequence represents a human PKIN-10 polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                               isolated human kinase polypeptides useful in the diagnosis, treatment and provention of cancer, immune disorders and disorders affecting growth and development -       
                                                                                                                                                                                                                                                                                                                                                                                     Claim 1; Page 115; 126pp; English.

One hundred and twenty eight novel nucleic acid sequences, treating and diagnosing e.g. cancer, asthma and Alzheimer's useful

ABL39747.

Claim 6; Page 213-214; 290pp; English.

CC vasotropic, antiarresionclerotic, antinflammatory, dermatological, Virulae, CC anorectic, muscular, anti-HIV, antiinflammatory, dermatological, CC anticoagulant, antiifibrinolytic, hypotension, antiasthmatic, cardiant, CC immunomodulator, anticonvulsant, antiidabetic, tranquilliser, antiulcer, CC immunomodulator, anticonvulsant, attiidabetic, tranquilliser, antiulcer, CC noctropic and contraceptive activities. The NS can be used in vaccines, CC gene therapy and antisense therapy. Nucleic acids, expression vectors and CC disgnosing e.g. cancer, osteoporosis, endometriosis, degenerative CC diseases, dystonia, multiple sclerosis, rheumatiol, degenerative CC diseases, restenosis, atherosclerosis, inflammation, skin disorders, CC glaucoma, obesity, muscular dystrophy, AIDS, infertility, cardiovascular CC disease, coagulation disease, ischaemia, hypertension, asthma, immune CC disease, coagulation disease, usurodegeneration, diabetes, anxiety, CC depression, schizophrenia, viral disease, gastric ulcers, stroke, CC Alzheimer's disease and as a contraceptive. ABL39691 to ABL39818 represent novel human nucleic acid sequences encoding the proteins given in ABB06037 to ABB06164. The neuroprotective, (NS) can have cytostatic, osteopathic, gynaecological, neuroprotective, antirheumatic, antiarthritic, antipsoriatic, ophthalmological, virucide, and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ð
ABL39691 to ABL39818 represent novel human nucleic acid sequences encoding the proteins given in ABB66037 to ABB66164. The novel sequences (NS) can have cytostatic, osteopathic, Synascological, neuroprotective, antirheumatic, antiarthritic, antipsoriatic, ophthalmological, virucide, vasotropic, antiarteriosclerotic, antiinfiammatory, dermatological, antorectic, muscular, anti-HIV, antiinfiammatory, dermatological, anticoagulant, antifbrinolytic, hypotension, antiasthmatic, cardiant, immunomodulator, anticonvulsant, antidiabetic, tranquilliser, antiulcer, antidepressant, gastrointestinal, aeuroleptic, cerebroprotective, noctropic and contraceptive activities. The NS can be used in vaccines, gene therapy and antisense therapy. Nucleic acids, expression vectors and diagnosing e.g. cancer, osteoporosis, endometriosis, degenerative, psoriasis, diseases, dystonia, multiple sclerosis, rheumatoid arthritis, psoriasis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            anorectic; muscular; antiinfertiilty; cardiovascular; anticoagulant; antifibrinolytic; hypotension; antiasthmatic; immunomodulator; cardiant; anticonvulsant; antidiabetic; tranquilliser; anticonvulsant; acuroleptic; gastrointestinal; virucide; antiulcer; cerebroprotective; nootropic; contraceptive; vaccine; gene therapy; cancer; osteoporosis; dystonia; endometriosis; degenerative disease; multiple sclerosis; psoriasis; rheumatoid arthritis; cataract; restenosis; atherosclerosis; glaucoma; inflammation; skin disorder; obesity; muscular dystrophy; AIDS; inflammation; skin disorder; obesity; muscular dystrophy; AIDS; ischaemia; asthma; immune disease; coagulation disease; hypertension; ischaemia; asthma; immune disease; capilepsy; angina; neurodegeneration; diabetes; anxiety; depression; schizophrenia; viral disease; stroke; gastric ulcer; Alzheimer's disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                polynucleotides and polypeptides can be used for preventing, treating or ameliorating medical conditions and diagnosing pathological conditions. Polynucleotides, polypeptides, antibodies, agonists and antagonists from the present invention may be used to treat immune disorders by activating or inhibiting the proliferation, differentiation or mobilisation of immune cells, to treat disorders of haematopoietic cells, autoimmune disorders, allergic reactions, graft versus host disease and organ rejection, modulate haemostatic or thrombolytic activity, modulate inflammation, cancers, cardiovascular disorders, neurological disease and bacterial or viral infections. The peptides, nucleotides, antibodies, agonists and antagonists may be also be used in drug screens. AAC78449 to AAC78457 and AAB4240 represent sequences used in the exemplification of the careful of the care
The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy technique
                                                                                                                                                                                                New isolated polynucleotide and encoded polypeptides, useful diagnostics, forensics, gene mapping, identification of mutat responsible for genetic disorders or other traits and to assebiodiversity -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        30-MAR-2001, 2001WO-US08631.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving abstrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp. wipo.int/pub/published_pct_sequences.

stringency liver. (I)

may c

The invention

The invention relates to a single exon nucleic acid probe (SENP) (I) for measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nucleotide sequences given in the specification (or complements/ fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult

                    The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlipiperoteinemia, hyperlipideemia and hypercholesterolaemia which is associated with coronary heart disease. ABG47348-ABG59930 represent human liver single exon encoded peptides of the invention. Note: The sequence information for this patent does not appear in the printed specification but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                 probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples which may enable the displace and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one o the probes of the invention.
